TO: West Street Residents

RE: Sewer Survey

Dear West Street Resident,

In the recent past some residents on West Street have noticed Sewer Odors. Depending on the resident location the odors reported have varied from strong most of the time to none at all.

The city has attempted to solve this problem by injecting a chemical in the wastewater stream to prevent odors.

In a further attempt to fine tune and eliminate the problem totally it would be appreciated if you would fill out the following survey. The results of this survey will help the city pinpoint exactly where on West Street odor problems continue to exist.

We appreciate your help and attention to this matter.

Sincerely,

Charles M. Applebee
Wastewater Superintendent

Pat Gilbert
City Services Director
